

# BarTender® Track & Trace™ Item & asset tracking that works with you

Transform item & asset chaos into organized, simplified, and efficient operations

BarTender Track & Trace delivers item & asset tracking that utilizes label data and details to transform invisible, hard to find items into instantly discoverable assets for complete visibility and accountability across operations.

## When to choose BarTender Track & Trace

- Need real-time visibility with accountability across single or multiple facilities
- Manual inventory tracking is causing operational delays, losses, or compliance risks
- Want to get more value and efficiency from existing RFID/barcode investment
- Required to reduce CapEx waste and gain better reporting and visibility

## Benefits

- Less time spent searching for assets
- Reduced equipment losses
- Eliminated duplicate purchases
- ROI in weeks + payback < 6 months

## Count

Simplify receiving & inventory

Eliminate receiving & inventory process errors, reduce time spent counting inventory, with 100% accuracy.

### Key Features:

- One-Scan Receiving
- Instant Inventory Cycle Counts
- Discrepancy Detection
- ASN Support
- Zone-Based Assignment

## Find

See & locate on demand

Replace delays & expense finding hard to locate items & assets with RFID searches that take minutes.

### Key Features:

- Real-Time Location Dashboard
- Find My Item™ uses RFID to locate anything, faster
- Quick Search
- Facility and Zone Maps
- Multi-Site Visibility
- Location History

## Report

Actionable insights, minimal effort

Make smarter, data-driven decisions about item & asset needs with less time spent generating reports.

### Key Features:

- Status Dashboards
- One-Click Report Generation
- Zone & Category Reporting
- Discrepancy Reporting
- Movement Audit Trails
- Easy Data Export

## Applications & Use Cases

### MANUFACTURING

- Tool and equipment tracking across production or sites
- Work-in-process inventory management
- Quality control checkpoints

### HEALTHCARE

- Medical equipment tracking
- Asset usage optimization
- Compliance documentation

### WAREHOUSE & DISTRIBUTION

- Receiving and shipping verification
- Inventory accuracy improvement
- Pick and pack operations

### FIELD SERVICES

- Tool & equipment allocation & tracking
- Vehicle inventory management
- Service call asset verification

## Transform your operations with Bartender Track & Trace

### Receive and validate inventory, fast, with 100% accuracy

- Scan barcodes and RFID labels to receive items
- See newly received inventory count and details
- Scan RFID items on shelves, in boxes, and on pallets instantly
- 100% RFID accuracy eliminates manual data entry errors
- Reduce duplicate counting to ensure inventory accuracy

### Find items quickly, even when out of sight, and get them where they need to go

- Search for items and see them by zone on customized facility maps
- Find My Item™ uses RFID with audible and visual cues to locate items faster
- Create picklists to collect and verify sets of items, all while updating available inventory
- Generate ASNs for accurate shipping and verified receiving between facilities

### Report inventory quickly, with less hassle, and accuracy you can count on

- Dashboards show key data and insights on-demand
- Generate detailed inventory reports including locations & history
- Create filtered reports to meet specific business needs
- Export as .CSV to integrate with other systems

## Licensing details

### Licensed by Device

Devices defined as:

Desktop console

RFID scanning device

### Packages include 3, 5, and 10 device licenses

Volume packages available

## Requirements & Deployment Process

### Hardware requirements

- RFID readers (handheld)
- Barcode scanners and/or mobile devices for field operations
- Wireless network connectivity (real-time synchronization)
- Label printers with RFID encoding capability (if using RFID)

### Software requirements

- Track & Trace License Subscription & Track & Trace mobile app
- Label design and printing software (works best with BarTender)
- Workstations with web browser and internet access

## Services & Support

### Onboarding & Deployment Support

Initial solution activation includes basic deployment services provided by Seagull Software including

- Tenant setup and configuration
- Zone & User configuration aligned to customer workflows
- Basic customer training

### Technical Support – Standard (included)

Global coverage and support for production impacting issues.
